Embracing the Digital Wave

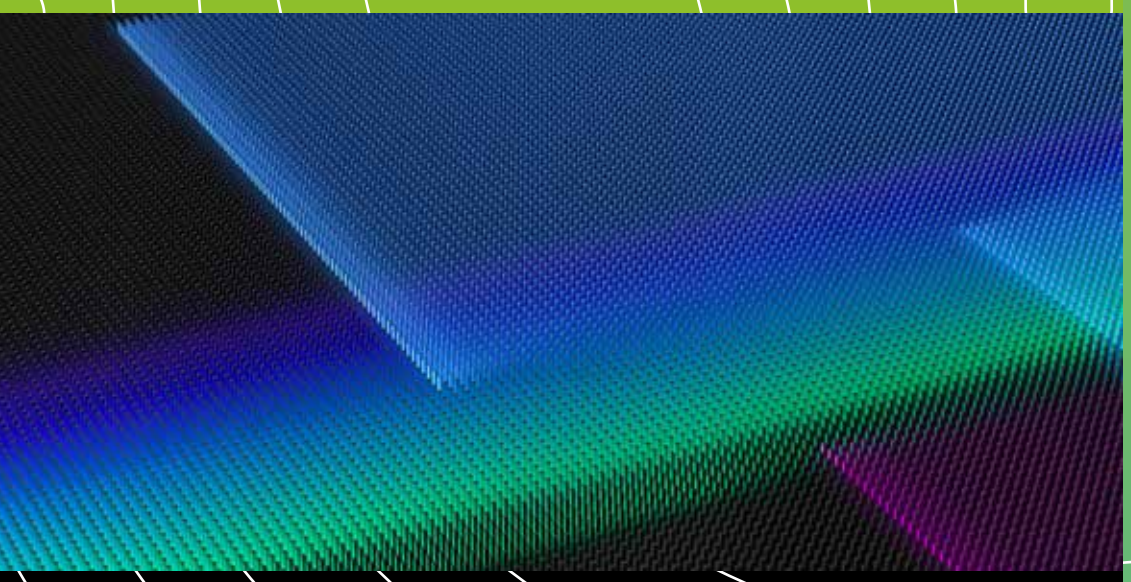
About Mediterra

Mediterra is the Data Center company backed by PEIF III, a fund managed by DWS Infrastructure, which is changing the paradigm of colocation, bringing **Premium Data Centers in strategic digital cities of Southern Europe** for a wide range of clients including manufacturing companies, financial institutions,large local and multinational enterprises, hyperscalers and IT services providers.

Services

Mediterra provides colocation, data center, and connectivity solutions across Europe.



Datacenter & Colocation

We are building an ecosystem in which regional, national and international partners and providers connect with each other. Mediterra provides colocation services, which allow companies to have their servers and hardware infrastructure hosted within its datacenters.

We aim to offer a quality of service that exceeds Tier IV, with the best availability level of 99.999 percent.

We are creating the leading platform of regional data centers in Southern Europe where we see significant potential for growth with the digital transformation developments.

Connectivity

We are a cloud and carrier-neutral data center, working as a connectivity hub. This allows clients to freely choose from a wide range of providers or opt for one-stop-shop solutions, which combine colocation and connectivity services. Special attention is paid to direct access both to a large network of domestic and international Internet Exchanges (IX) and subsea cables ecosystem.

We aim to create an interconnected network between all of our sites via a Software Defined Network (SDN), allowing customers to be virtually present in each Mediterra data center and to easily access services and partners in each location.

Customer Support

We are close to your strategic infrastructure and provide a 24-hour, 365-day-a-year physical presence, ensuring continuous and proactive support.

Mediterra operates an **extended solutions partner, seamlessly integrating with your team remotely and offering expert technical advice at all our locations.** Our services include integrated pre-sales support, project management assistance, and a constant focus on the customer experience.
